

Install CmdStan

Installing the R package

Run the followong chunks if you don't have CmdStanR and/or CmdStan installed.

You can install the latest beta release of the cmdstanr R package with

```
# Recommended running this in a fresh R session or restarting your current session  
install.packages("cmdstanr", repos = c("https://mc-stan.org/r-packages/", getOption("repos")))
```

Installing CmdStan

To instead install the latest development version of the package from GitHub use

```
#Run this if you need to:  
#install.packages("remotes")  
remotes::install_github("stan-dev/cmdstanr")
```

If you don't already have CmdStan installed, then, in addition to installing the R package, it is also necessary to install CmdStanR's

```
install_cmdstan()
```

A suitable C++ toolchain is also required.
